HumanEyes Unveils Flash Proofing Feature with Latest Version of Creative3D 1.5

Jerusalem, Israel, 5 June 2007 -- HumanEyes Technologies, the leading 3D and lenticular software developer, unveils the latest version of its Creative³D software — Creative³D 1.5.

Creative³D Version 1.5 incorporates a Proof Preview for Creative³D which enables display proofs of lenticular and 3D designs to be viewed as Flash files. In Creative³D 1.5, a Proof Preview can now be accessed from the file menu in real-time creating a Flash file that can be opened in a player or in a web browser – which can be sent to clients for proofing.

Creative³D 1.5 is available as a stand-alone product or as a simple upgrade package for designers who have already invested in Creative³D Version 1.0. Those with Creative³D Version 1.0 are also able to trial the new version for free prior to purchase.

HumanEyes Creative³D software allows designers to independently control the entire creative process of 3D and lenticular designs. Conversion of 3D content from 2D imagery and the creation of lenticular 2D animation effects (e.g. flips, movement, rotation and more) can now be accomplished quickly and professionally, with full control and superior quality. Creative³D users are able to review in real-time the behavior of each frame of the project and thus apply needed changes accordingly.

Creative³D for the design community has been updated to include new capabilities and features designed to enhance user experiences. CreativePro 1.5 offers several new feature enhancements, including:

- Improved flip capabilities that make the timeline even easier to use.
- New Convergence Tool – Can be used with 3D pictures to change the focal point.

“Fast, high quality proofing was the number one request we had from the market, so I’m very pleased to say we’ve delivered it in this next version of Creative³D,” says DUBY HODD, CEO, HumanEyes Technologies. “Designers and their clients can now quickly and easily see quality simulations of lenticular creations at any stage in the job cycle.”

About HumanEyes

HumanEyes Technologies, Ltd. is the category leader in providing complete, end-to-end solutions for creation and printing of 3D and 2D effects. The award-winning company develops software for photographers, graphic artists and printers, and helps the marketplace understand and maximize the proven, high value of lenticular marketing.

HumanEyes Technologies applies vast experience and knowledge in the lenticular segment to engineer software that noticeably enhances creativity and productivity without compromising efficiency and practicality. An extensive Professional Services operation gets customers up and running - quickly and easily. HumanEyes Technologies is driven by a strong and diversified pool of talent, with worldwide expertise in computer graphics, printing, sales and marketing.

With offices in the US, Japan and Europe, HumanEyes is a true multi-national company providing sales, training and support - in close proximity to its customers, and in their native languages.

HumanEyes' Board of Directors includes: Benny Landa, founder and former CEO of Indigo (now a division of Hewlett-Packard); Duby Hodd, HumanEyes' CEO; Yoav Chelouche, former President and CEO of Scitex; Mimi Sela, CEO of Landa Ventures; Alon Dumanis of the Van-Leer Group and Gideon Ben-Zvi, former CEO and co-founder of HumanEyes, Ligature and Wizcom.
